  - (EPICS device/driver support)
- Displays

## Thank-yous

Interface to legacy SLC control system:

*Stephanie Allison, Diane Fairley,*

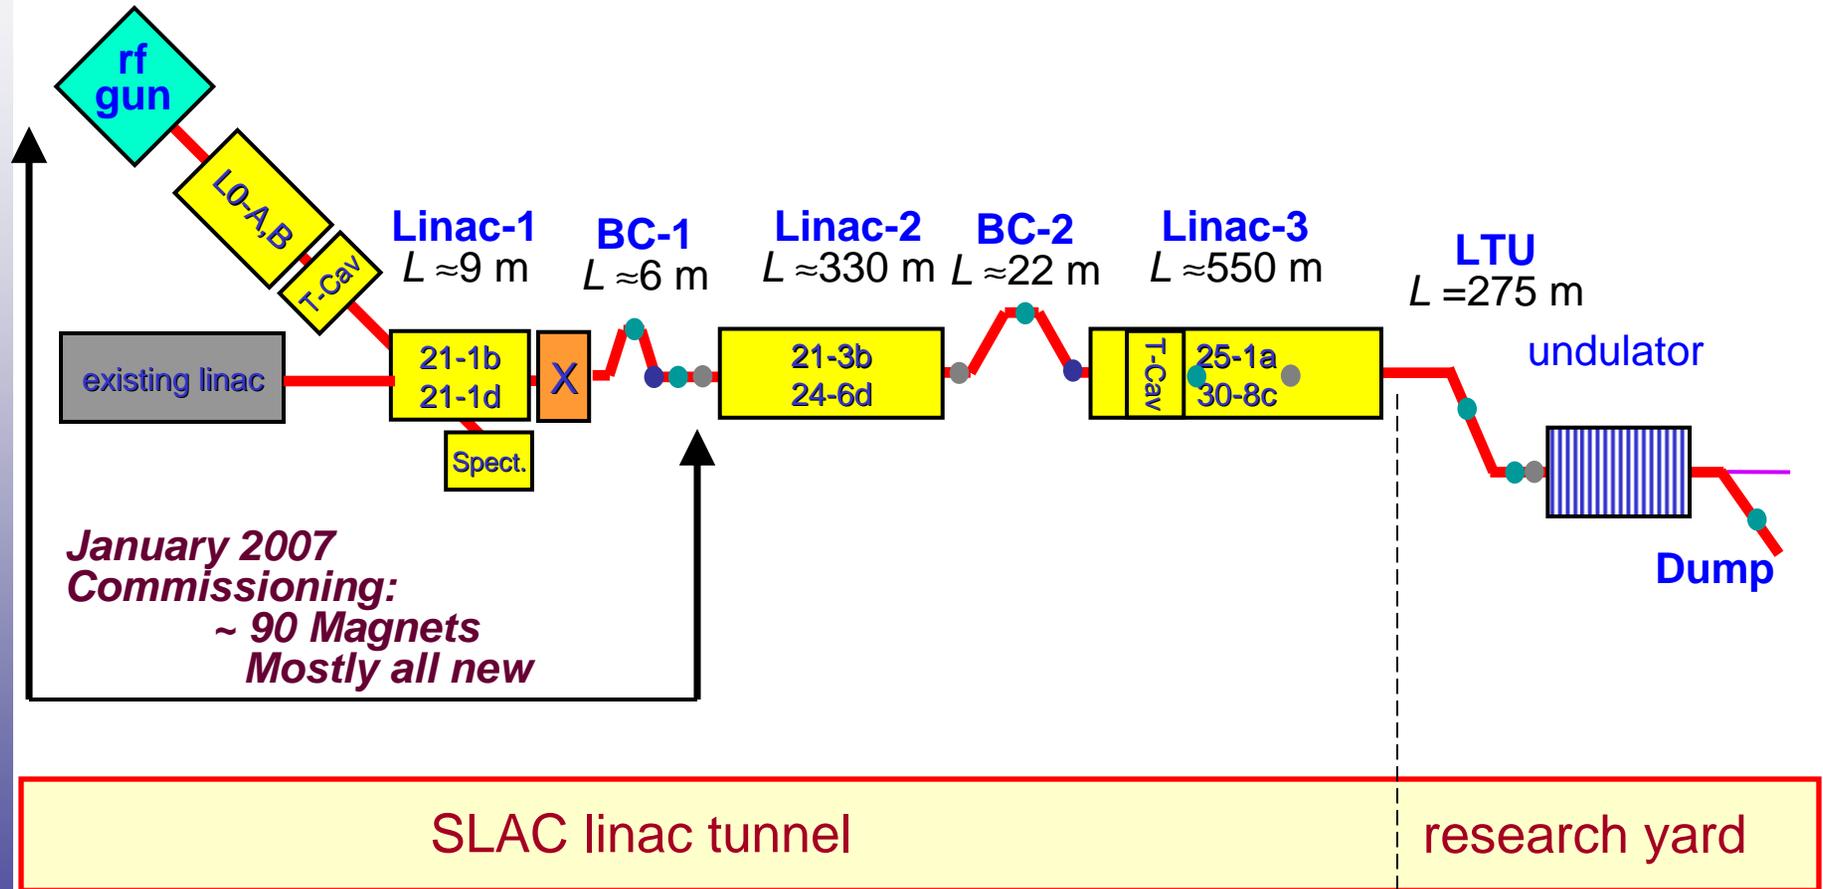

*Ron Chestnut and group,*

*Ron McKenzie*

Magnet Control:

*Kristi Luchini, Stephanie Allison*

# LCLS Conceptual Diagram

## Design Issues

At least in the “short term”, LCLS wants to leverage the usage of legacy SLC control system high level physics applications ...

1. New magnets must be controlled and monitored from legacy SLC – with minimal code modification to SLC (VMS, Fortran, assembly etc)
2. New magnets will use EPICS for control

# *How do we integrate the legacy system with the new EPICS controlled system?*

June 15, 2006

LCLS Magnet Control

## Answer: SLC-Aware IOC

# Magnet SLC-Aware IOC Architecture

## Design Issues

1,2, Solved: Communication bridges in place between the old and the new

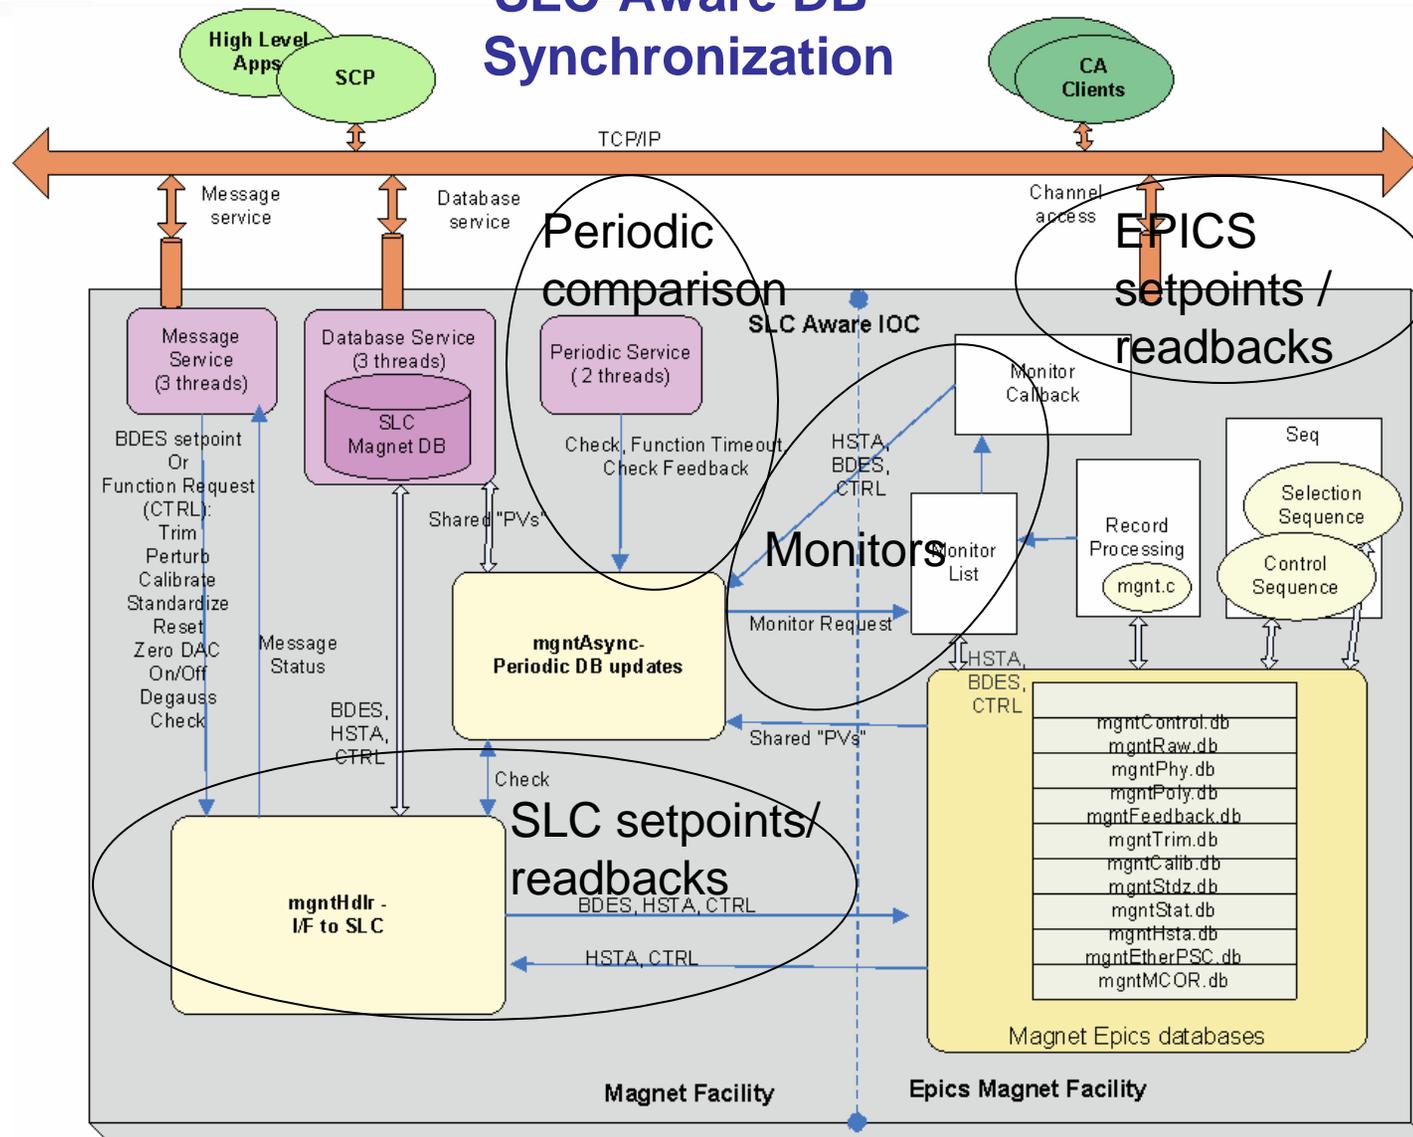

3. There are two distinct databases:

- **SLC**

- **EPICS**

How to synchronize?

# SLC-Aware DB Synchronization

## EPICS Databases

- Per device
  - Polynomial Coefficients (provided by MMF)
  - B field settings: user, feedback, HLApps; tolerance, limits settings; B->I conversions
  - Raw Current settings; I->B conversions
  - Power Supply Controller I/Fs: interlocks, setpoints, readbacks
  - Control functions
    - Master Control DB (incl. on/off, reset, zero current)
    - Supporting DBs: Trim, Standardize, Calibrate, Feedback
  - Status – SLC, EPICS, and Summaries
- Per IOC - Multi-selection of devices; multi-function, *(new!)*
- Template and substitution files using macros

## Sequencer SNLs

Per device, handles -

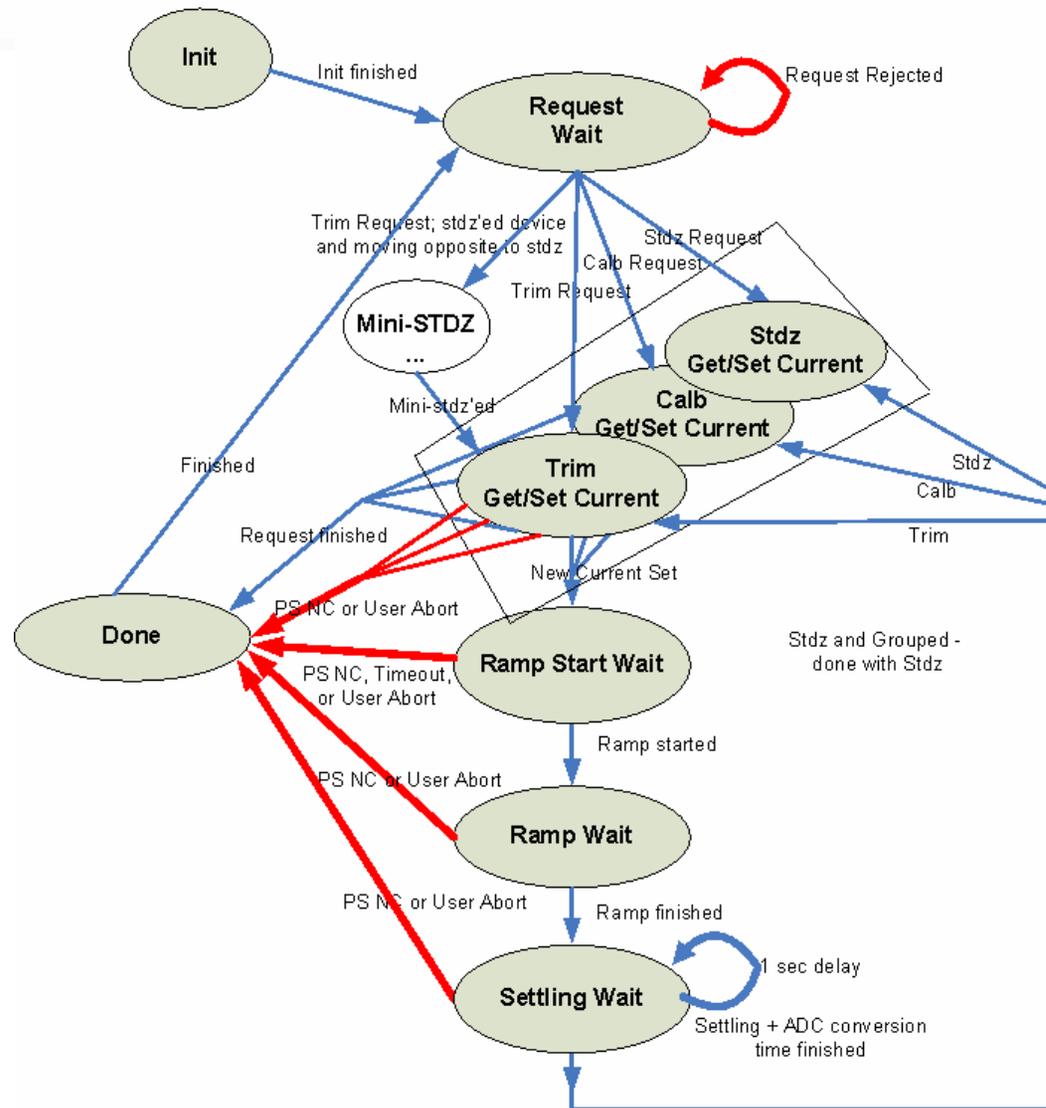

- “More complicated” control functions
  - Trim, Calibrate, Standardize,...
- Transitions between steady states
- Timeouts
- User Abort
- Error conditions and message reporting

Per IOC -

- Multi-select devices/functions, abort

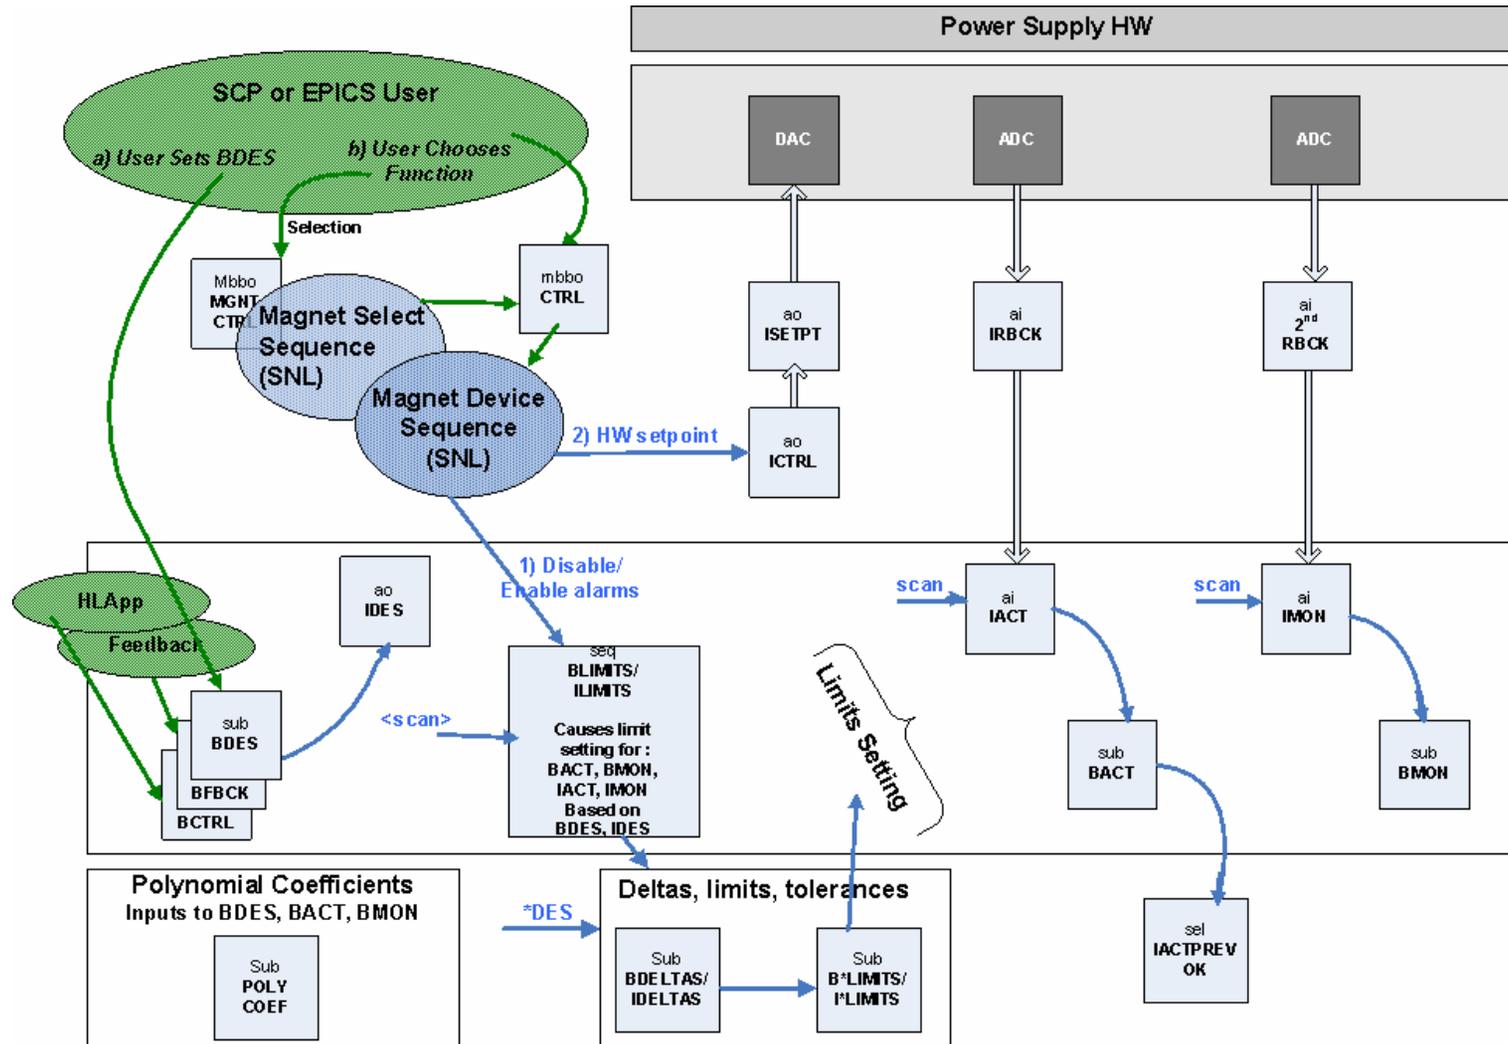

## Magnet Device SNL for:

- Trim
- Calibration
- Standardize

\* PS NC = Power Supply No Control

# EPICS Magnet Facility- Record Processing / SNL

## Displays – for January 2007 Commissioning

- **Legacy SLC SCP Displays**
  - Control and monitor all magnets
  - Correlation plots, orbit fit, orbit display, orbit correction, bump calculation, power steering, multi-knobs, ...
- **EPICS EDM Displays**
  - Control and monitor new magnets; monitor existing
  - Perform more than one function at a time
  - More status available
- **Legacy and EDM overlap functionality**
  - Status color code maintained
  - SLC Status, SLC DB maintained
  - Magnet functions controlled similarly, except for multi-function
  - SLC DB name annotations are on EDM

## Conclusions

- SLC-Aware IOC will pay off for LCLS
  - Integrates legacy system to new
  - Allows usage of a rich set of existing legacy HLApps
  - Buys time
  - Made possible by the EPICS OSI libraries
  - Endian issues were a pain
- Users are excited for EPICS controlled magnets
  - Better GUIs
  - Multi-function magnet control

# Thank-you for being a magnetic audience!
